TITLE

MECHANICAL HEART

PRIORITY INFORMATION

This application is a continuation of PCT Application No. PCT/SE02/00689, filed on April 8, 2002, which claims priority to Swedish Patent Application No. 0101259-0, filed April 10, 2001, all of which are incorporated herein by reference in their entirety

DESCRIPTION

10

Technical field

The present invention relates to an artificial heart comprising a series of towing and pressing means and intended to be implanted in a patient to replace the pumping acitivity of a heart.

15

The object of the present invention is to obtain an artificial heart to be implanted into a patient to replace whole of or part of the activity of a heart.

Background of the invention

The last years there has been an increased demand within cardiology for an efficient heart prosthesis.

Heart diseases and often in combination with circulatory diseases give <u>raise</u> to a serious threat against the patient's life.

25 ·

Heart failure, as a result of a longterm weakness of the function of the heart, is a very serious condition and will sooner or later lead to death.

Access to healthy donator hearts is also very restricted and a patient may have to wait for several years for a suitable heart to be presented for implantation.

For these reasons it is of great importance to find and develop an artificial heart or rather an apparatus which can offer a continuous, harmless, comfortable, and reliable substitute for a weak, failing heart.

35

For many years a number of artificial heart prostheses have been introduced. However, these show a number of deficiencies and drawbacks, such as lack of implantability, lack of physiological pliability, lack of longterm use as well as lack of pliability with regard to beat-volume.
